

1. This is an equity fund invested in global equities and money market instruments (including cash). The fund will have limited RMB-denominated underlying investments. The value of the fund could then be more volatile and the fund may suffer significant losses.
2. Investing in this fund may involve equity risk, market and volatility risk, currency risk, concentration risk, RMB classes related risk, hedging risk, and profit distribution policy-related risk. It may also involve risks attached to the use of Financial Derivative Instruments (FDI) for hedging and investment purposes, and risk of small and medium sized companies.
3. As RMB is not freely convertible, the investment in RMB classes may be adversely affected by the fluctuation in the exchange rate between RMB and other foreign currencies and the liquidity of RMB at the relevant time. In case of sizable redemption requests for the RMB classes, the Manager has the absolute discretion to delay any payment of redemption requests from the RMB classes.
4. For hedged classes, there is no guarantee that the hedging techniques employed by the manager will fully and effectively achieve the desired result and effect. Furthermore the volatility of the hedged classes may be higher than that of the equivalent class denominated in the fund's base currency. If the counterparties of the instruments used for hedging purpose default, investors of the hedged classes may be exposed to currency exchange risk of the currency of denomination of the relevant class on an unhedged basis and may therefore suffer further losses.
5. For Distribution classes, the Manager may at its discretion determine to pay dividends out of income or capital of the fund. In addition, the Manager may at its discretion pay dividends out of gross income while charging / paying all or part of the fund's fees and expenses to the capital of the fund, resulting in an increase in distributable income for the payment of dividends by the fund, in which case, the fund is effectively paying dividends out of capital. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Such distributions may result in an immediate reduction in the net asset value per unit of the fund.
6. For Distribution II class, the quarterly distribution is not guaranteed, and the fund's asset for this share class available for investment will be further decreased after each quarterly dividend payment.
7. Investors must read the offering document carefully for further fund details, especially the details of risk factors. Investors should not only base on this marketing material alone to make investment decisions.

\*\* Annualised dividend yield =  $[1 + (1 + \text{monthly distribution per unit/ex-dividend NAV}^{*12-1})^{*1} + (1 + \text{quarterly distribution\# per unit/ex-dividend NAV})^{*4-1} - 1]$ , where # is for Distribution II class. The annualized dividend yield is calculated based on the last dividend distribution(ex-dividend date) with dividend reinvested, and may be higher or lower than the actual annual yield. For Distribution II class, the Manager, on quarterly basis, will declare and pay any amount which per unit exceeds the Initial Offer Price after declaring the dividend for that calendar month to those registered unitholders as at the end of the quarter. Therefore, the annualized dividend yield in March, June, September and December may materially higher than in other months due to the potential quarterly distributions which is subject to the Sub-Fund's performance. Investors in this share class may forgo the reinvestment potential of these quarterly distributions. Positive distribution yield does not imply positive return. Dividend is not guaranteed.
